

INNOVA

MINI AMP KIT

INSTALLATION INSTRUCTIONS

Professional installation is recommended. If you choose to not have this product installed by a professional, we highly recommend that you exercise caution, care, and patience when installing this product.

Make sure your cart's TOW/RUN switch is in the tow position.

Locate where you would like to mount your mini amp.

Note: Do not mount in battery box.

Run your wires for your power source and ground to the amp.

Note: We recommend using a 16 to 12 voltage reducer or 12v 30amp converter to insure a clean 12V input. You will also need to run the miniamp through your 12v 30amp converter or install a in-line switch to turn mini amp on/off to avoid battery drainage and ensure the miniamps longevity.

(Blue Tooth)

You will need to pair your devise with the blue tooth receiver. Turn on your devise and search for the signal. Once your devise has found the blue tooth receiver it will ask for a pairing code. That code is "0000". You will only need to do this once.
