

STW CC0 RNBW & STW EZ0 RNBW Light-Up Steering Wheel For 1984-2005 Club Car DS Models and all EZGO Models Installation Instructions

BUGGIES
UNLIMITED

1. Before you mount the wheel to the adapter, you will need to connect the power module to the wire on the back of the wheel.

2. Tuck all the wires into the empty space between the adapter and the wheel. Make sure no wires interfere with the screws on the steering wheel.

3. Run the wire down along side of the steering wheel column. You may need to drill a hole to run the wire behind the dash. To keep the wire in place, use a clip and screw it to the base of the dash.

4. You will need a 12 volt test light to find the parking light fuse normally located in the fuse box. Connect the **Red** wire to the parking light power (+). Connect the **Black** wire to ground (-). The **Pink** wire is optional and can be connected to the brake light wire for a dash function when the brakes are pressed.

5. Check to see that there are no wires interfering with any moving parts in the vehicle.
