

Chameleon C-Channel Installation

Caution: Wear Appropriate Eye Protection!

Yamaha G14~G22:

Mount the 49" side rails with c-channels facing outward. Center the rail between the front and rear top mounting struts. The V-cuts line up with the bolts and after loosening the bolts slip the rail in-between and then just tighten all the hardware.

Rail placement is shown in middle picture. 

For the rear center, and place the 42" rail with c-channels facing out. Rivet or install screws through the top and rail. Two rivets or screws will hold the rail secure enough.

Tech Note: For rear struts mounting depends on strut configuration due to rear seat, cargo box or standard O.E.M. placement. You will still center the c-channel the same.
